

POSITION in YEAST CELL BIOLOGY AVAILABLE

We are looking for a highly motivated and talented young researcher in **yeast cellular biology** with a master degree in Biological Sciences or Biotechnology. In your role, you will work on an exciting research project on the biochemical laws which integrate signals from key metabolic sensory systems, such as AMPK, and synchronize their activities with **cell cycle** clock. **Fluorescence microscopy and single cell imaging** techniques will be also used to evaluate cellular response as a function of different growth conditions of cell cycle and redox signals mutants to deeply investigate the regulatory mechanisms of essential functions of living cells.

PhD is not a requirement for candidates.

At least one publication is required to apply.

Starting from **Autumn 2022** in the group of Prof. Coccetti.
